

The loss of the Earth's biodiversity and the degradation of its ecosystems pose a great risk to human survival and development. Protecting our only home requires a global effort to halt the trend of biodiversity loss and restore natural ecosystems.

The global initiative The Economics of Ecosystems and Biodiversity (TEEB), coordinated by the UNEP, is working with the Ministry of Ecology and Environment of China and the Chinese Academy of Sciences, with funding from the European Union, to model the costs and benefits to nature, economy and society of different agricultural development pathways, to support the development of sustainable agricultural policies, conservation of biodiversity and restoration of degraded landscapes. The national "Green is Gold" practice innovation base – Tengchong City, Yunnan Province, is the pilot area for this collaboration. Check out more. #World Environment Day
